

Greater mobile connectivity will improve access to healthcare, education and finance

6 May 2010

Internet broadband is directly linked to the GDP growth of a country. Services being distributed virtually to rural areas across Africa will enable recipients to become better informed and therefore empowered. Educating children in school about ICT hardware and software applications will eventually create capabilities and build capacity so that Africans can realistically enter the value chain. Lack of regulations is making it difficult for ICT companies to develop innovation and operate in certain countries in Africa, making a replication of services across Africa a challenge.

The World Economic Forum is an international institution committed to improving the state of the world through public-private cooperation in the spirit of global citizenship. It engages with business, political, academic and other leaders of society to shape global, regional and industry agendas.

Incorporated as a not-for-profit foundation in 1971 and headquartered in Geneva, Switzerland, the Forum is independent, impartial and not tied to any interests. It cooperates closely with all leading international organizations (www.weforum.org).

World Economic Forum, 91-93 route de la Capite, CH-1223 Cologny/Geneva
