

Towards a Greener Davos

4 December 2010

At the World Economic Forum Annual Meeting 2011, the Forum will pursue the initiative introduced last year to address participant concerns about the environmental impact of the Annual Meeting.

The “Towards a Greener Davos” initiative aims at lowering the amount of pollutants released into the environment by the over 2,500 participants and staff travelling from Zurich to and within Davos and Klosters.

This initiative further advances the Forum’s mission of “improving the state of the world”.

Vehicles arriving in Davos will be required to meet the emission standards listed below, which were agreed by the Forum and the township of Davos.

Vehicles unable to meet these standards will not be able to access the security zones around the Congress Centre or the hotels Belvedere and Seehof.

The emission standards are:

- Maximum emission of CO₂: 200 g/km
- Maximum use of fuel: 9 l/100 km
- Maximum energy class: D

A complimentary shuttle service will be provided from Zurich and to and from hotels in Davos and Klosters, the Registration Area and the Congress Centre.

[The World Economic Forum aims to minimise the carbon footprint of the Annual Meeting](#)

The World Economic Forum is an independent international organization committed to improving the state of the world by engaging leaders in partnerships to shape global, regional and industry agendas.

Incorporated as a foundation in 1971 and headquartered in Geneva, Switzerland, the World Economic Forum is impartial and not-for-profit; it is tied to no political, partisan or national interests (<http://www.weforum.org>).
